Initial Build Review Notes

Topic: Martin Margiela
Creative Director: Kyle Chang
Review date: November 13, 2026

Overall direction

The white background, generous negative space, and numbered sections create a clean, archival feeling that fits Margiela. I would keep this direction while refining the numbering system, readability, and depth of the content.

Visual refinements

Navigation numbers: Please make the outline that appears on hover a true circle rather than an oval. Keep the numbers centered and use a consistent circle size and line weight across all menu items.

Section numbers: Numbers in the page content, such as “04 / Beyond Fashion,” should remain circled even when the cursor is not hovering. This would make the numbered-label reference feel more consistent throughout the site.

Body text: The uneven spacing between words interrupts the reading flow. Left-align the paragraphs and refine the text size and line spacing so the copy is comfortable to read while keeping the restrained typography.

Content and image treatment

Fashion Career: This section would benefit from more examples of his actual design work. Add selected garment or collection images with brief explanations showing deconstruction, repurposed materials, and unconventional silhouettes.

Captions and credits: Add collection or artwork titles and dates where available. The Sources section should link to the specific image sources and articles, rather than only listing image descriptions or general websites.

Responsive design and next steps

For mobile, use a clear single-column sequence for images and text, keep captions readable, and make navigation easy to tap. Check that circular number outlines remain circular at different screen sizes and that the layout does not require horizontal scrolling.

The next revision should prioritize the number treatments and text readability, then expand the fashion content and complete image credits. Preserve the quiet white background and editorial spacing as these details are refined.
